

SPRING EXTERIOR MAINTENANCE CHECKLIST

Roof Inspection

- Visual Inspection:** From the ground, check for missing, loose, or damaged shingles. Look for any signs of wear and tear, especially around chimneys, vents, and skylights.
- Clear Debris:** Remove any leaves, branches, or other debris that may have accumulated on your roof over winter. Clogged gutters can lead to water damage.

Siding Inspection

- Look for Damage:** Walk around your house and inspect your siding for cracks, loose panels, warping, or signs of rot. Early detection and repair can prevent more extensive problems down the line.
- Clean and Maintain:** Depending on your siding material, you might need to wash it with a mild cleaning solution or repaint any chipped or faded areas.

Gutters & Downspouts

- Clear Clogs:** Remove leaves, debris, and anything else that could obstruct the flow of rainwater. Clogged gutters can cause water damage to your roof, foundation, and siding.
- Check for Leaks and Damage:** Inspect your gutters and downspouts for any leaks, cracks, or loose fasteners.

Windows & Doors

- Check Seals:** Open and close your windows and doors to ensure they seal properly. Look for any cracks or gaps around the frames that could allow drafts or moisture intrusion.
- Lubricate Hinges:** Apply a light coat of lubricant to door and window hinges to ensure smooth operation and prevent rust.

Additional Considerations

- Deck and Patio:** Inspect your deck or patio for any loose boards, cracks, or signs of rot. Clean and re-stain or seal as needed.
- Walkways and Driveway:** Inspect your walkways and driveway for cracks or uneven surfaces that could pose a tripping hazard.
